

Professional Safe Lock Opening (UPDATED & Includes Electronic Safe Lock)

This hands-on course was developed for advanced technicians desiring safe opening and penetration skills. This course is designed to teach you the tools and skills to accurately locate and drill into a safe lock to defeat the lock without damaging the integrity of the malfunctioning safe.

Course Topics

- Combination lock orientation, identification and specifics
- Establishment of safe type, construction & bolt work configuration
- Hardplate and material types
- Drill point determination & penetration of various hardplate materials
- Service & correctly repair drilled safes
- Non-drill methods for opening electronic safe locks include:
LaGard 33E, LG Basic II, S&G 6120, Kaba Mas Auditcon 252, Lp Locks RotoBolt, SecuRam Biometric and more

Students will be instructed how to set-up and use safe opening and drilling equipment such as Lockmasters Little Black Box and JumpBox and fixed template drill and lever rigs. Barrier materials and the drill bits required to penetrate those barriers will be introduced to you. You will plan how to "attack" a safe with instructor supervision and make several openings over the three day period including: fence shot, borescope, internal relocker, external relocker, lever/bolt screw.

Prerequisite: Electronic & Mechanical Safe Lock Servicing

Course Includes

- Manual & tool kit

Course Benefits

Covers KSA Civil Service requirements for Grades 8 & 9 Locksmith

Course Length - 3 Days

Course Tuition - \$675

GSA Schedule - \$600

One Time Student Enrollment Fee - \$100
