

Introducing A *First-of-its-Kind CLASS!*

NEW! SCIF Acoustical Door Installation Class

This 2-1/2 day class is designed to show you how to properly install acoustical SCIF (Sensitive Compartmented Information Facility) doors. These specialty doors require precise installation to maximize security and maintain the best sound protection possible. Lockmasters' has teamed with Overly Door Manufacturing to create the Door in a Box which has all the door hardware pre-installed on the door. Everything you need to install the door is supplied in the door kit.

The course will review proper wall construction to support these doors, tools needed, and installation techniques and tips. The hands on portion of the course will be the installation of an outswing, inswing and double door complete installation so you will be required to lift at least 70 lbs. To make the doors completely operational we will connect the door closers and the access control system into SCIF locks such as the LKM7000 and LKM10K series locks.

Who Should Attend:

Any door installer that wants to become a Certified Overly STC door installer while getting the best hands-on experience on how to properly install STC single and dual doors.
