

Basic Safe Penetration

Course # LSI151

This course was developed for advanced technicians or Mechanical Safe Lock Servicing graduates desiring safe penetration skills. This course is designed to teach you the skills to accurately locate and drill into a safe lock mechanism to defeat the lock without damaging the integrity of the safe when it has malfunctioned.

COURSE DESCRIPTION

This is a “hands on” course and is intended for experienced locksmiths and safe technicians or students who have completed LSI’s Safe Lock Servicing course.

Students in this class will learn:

- To identify specific types of combination locks and lock orientation
- To identify types of safes, construction of safes, and boltwork configuration
- Types of hardplate used in safes to protect combination locks
- To determine drill points and penetrate (drill) various types of hardplate
- Service and correctly repair drilled safes

*Students in this class will use proven state-of-the-art tools equipment during this class.
Each student takes home the tool kit they use in class*

* Prerequisite:
LSI Mechanical Safe Lock Servicing

Course Credentials include LSI Diploma
